

aesthetic sensibilities

With a zest for creativity and a love of science, Dr. Gregory A. Buford combines his artistic zeal and dedication to medicine to establish a strong reputation in plastic surgery. "Having a detail-oriented eye and curious mind allows me to approach the human body with fascination. I notice how a small tweak or a bit of volume could enhance my clients' appearances and appreciation of their own beauty."

Dr. Buford is an advisor and consultant for many of the technologies he incorporates within his very own office—imparting his skills to his private-practice patients and the physicians he trains from across the country. Patients of the Colorado practice are offered procedures such as tummy tucks, laser skin resurfacing and breast augmentations. His "before baby body" makeover caters to moms who want to reclaim the physique they had before children; it's a procedure that combines breast augmentation with body sculpting, yielding about a week's worth of downtime. "Busy moms on-the-go appreciate the opportunity to undergo multiple procedures in a single surgery. Combining treatments into a single surgical session helps to condense recovery time and enhance the rejuvenation benefits we can deliver."

Nonsurgical options like Juvéderm™ and BOTOX have opened up the door for patients who desire rejuvenation but may not be ready for surgery. "I'm excited for the development of more injectables and minimally invasive procedures," says Dr. Buford. "Patients always appreciate options, and the injectables lend themselves to combination procedures that elicit subtle results." Helping the doctor maintain his flourishing practice is an able and attentive staff that keeps the "elegant but never pretentious office," as described by Dr. Buford, running smoothly and efficiently. "Customer service should be a hallmark of any worthy establishment. There is no feeling of intimidation—simply patient-friendly care and a fluid journey, from start to finish."

"And in the end, it's not
 the years in your life
 that count. It's the life
 in your years."

—ABRAHAM LINCOLN

INSIDE INFORMATION

HEART OF A TEACHER

"I really enjoy educating," says Dr. Buford. "Whether it's a personal consultation with a patient or on a television program broadcasted to many viewers, I love facilitating the spread of knowledge, especially when it comes to **ANTI-AGING, SAFETY AND PLASTIC SURGERY.**" This **QUEST TO ENLIGHTEN** recently led him to write a how-to book on practice management. "Many medical students graduate school with a thorough knowledge of techniques and procedures, but are unaware about the business side of running a practice. My book will lessen the gap between what it takes to manage a **HIGH-TECH, HIGH-TOUCH PRACTICE.**" Dr. Buford is frequently called upon to impart his knowledge by a host of magazine and television entities, ranging from *Vogue* to FOX television. He is the director of both the Lumenis® Laser Training Center and the BOTOX® Cosmetic Training Center, and is a consultant for Perlane® and Restylane®. On that note, he is also a national trainer for the above-mentioned technologies [BOTOX, Perlane, Restylane and Lumenis Encore Laser], in addition to **VASER® LIPOSELECTION®, SCULPTRA® and EVOLENCE®.** It's therefore no surprise patients have come to count on his medical understanding. Rounding out his professional affiliations, Dr. Buford is a member of the **MENTOR LEADS ADVISORY PANEL AND THE MENTOR ADVISORY COUNCIL.** "There's always something new in the medical field, so staying updated and ahead of the learning curve is a must. In today's information age, learning and educating are true keys for success."
